ClinicQ

Clear your inbox faster — and know nothing has been missed.

ClinicQ helps you move through your inbox efficiently; it saves you time and reduces your medico-legal risk.

Instead of relying on memory, habits, or scattered reminders, it turns follow-up work into structured, owned, and closed-loop workflows – something existing systems do not enforce.

Existing systems store information — but rely on people to follow the workflow.
ClinicQ builds the workflow into the system itself.

WITHOUT ClinicQ	WITH ClinicQ
Work disappears	Work is assigned
No ownership	Explicit ownership
No visibility	Fully tracked
No closure certainty	Closed-loop completion

The difference

Existing medical software stores information and relies on people to follow the workflow. ClinicQ builds the workflow into the system itself — enforcing ownership, visibility, and completion.

ClinicQ works alongside existing medical software. It does not replace your system — it governs what your system does not control.

Completion certainty

Most systems get you to 'I think it's done'. ClinicQ gets you to 'it's clearly closed or still open'.

How it works

1. Inbox item arrives
2. Converted into a governed workflow
3. Ownership assigned
4. Action completed and verified
5. Remains visible until fully closed

Nothing gets lost, nothing sits unowned, and nothing disappears until it's done
