CLEAR YOUR INBOX FASTER
— and know nothing has been missed.

ClinicQ helps you move through your inbox efficiently while ensuring every follow-up is clearly owned, tracked, and completed.

Instead of relying on memory, habits, or scattered reminders, it turns follow-up work into structured workflows that stay open until they're genuinely done.

Existing systems store information — and rely on doctors to enforce the workflow.
ClinicQ builds the workflow into the system itself – so nothing gets lost.

WITHOUT ClinicQ	WITH ClinicQ
Work disappears	Work is assigned
No ownership	Explicit ownership
No visibility	Fully tracked
No closure certainty	Closed-loop completion

The difference

Existing medical software stores information and relies on doctors to follow the workflow. ClinicQ builds the workflow into the system itself — enforcing ownership, visibility, and completion.

ClinicQ works alongside existing medical software. It does not replace your system — it governs what your system does not control.

Completion certainty

Most systems get you to 'I think it's done'. ClinicQ gets you to 'it's clearly closed or still open'.

How it works

1. Inbox item arrives
2. Converted into a governed workflow
3. Ownership assigned
4. Action completed and verified
5. Remains visible until fully closed

Nothing gets lost, nothing sits unowned, and nothing disappears until it's done
